Environmental Policy Statement

2020

Environmental Policy

In recognition that our activities have an impact on the environment and our commitment to improve our environmental performance and minimise harmful effects on the environment we have prepared a separate Environmental Policy and an Environmental Management System.

Employees will be informed on all environmental aspects and issues as they affect our undertaking and the implementation of procedures detailed in our environmental management system.

Site Waste Management Plans

Site waste management plans (SWMPs) aim to reduce the amount of waste produced on construction sites and to prevent fly-tipping. They do this by setting out how building materials, and resulting waste, is to be managed during the project.

The Site Waste Management Plans Regulations 2008 were rescinded in December 2013 but many construction companies intend to carry on using them as best practice. It is the policy of this organisation to have in place a SWMP for each construction project that it undertakes.

In this respect, for each construction project, the company will:

- Appoint someone to take overall responsibility for the SWMP.
- Identify the types and quantities of waste that will be produced during the project by working out in advance what materials will be used and estimating how much waste will be reused, recycled or disposed of.
- Work out the best options available for recycling and disposal.
- Ensure that all waste is stored and disposed of responsibly.
- Ensure a record is kept of all waste disposed of or transferred through a system of signed waste transfer notes.
- Ensure that waste contractors comply with all legal responsibilities.
- Carefully plan what materials are needed for the project and state all SWMP targets on the data sheet.
- Ensure that everyone on site knows about the SWMP.
- Develop a training programme for all contractors and site workers to ensure that everyone is aware of the importance of asking for and recording the correct paperwork, receipts, destinations for materials, etc.
- Measure how well the SWMP is working by assessing how much and what type of waste is being produced as the project progresses.
- Assess how effectively the materials on site were managed and how well targets for waste management were met at the end of the project to learn lessons for future projects.

Sam Paterson (Health & Safety Director – PJW Ltd)
